

Seminar On Chinese Modernization and African Development (Anhui), China

2024-10-30----2024-11-06

Justus Thuthi

China's modernization provides Africa with a model for economic development and social governance that prioritizes collaboration, autonomy, and long-term planning. China's modernization experience can assist African countries in accomplishing their development objectives, such as poverty reduction, economic independence, and industrialization. African nations must approach their interaction with China strategically, focusing on matching national development ambitions with key sectors where China excels. Chinese modernization serves as a model for Africa's growth and development.

In the spirit of advancing this concept experts drawn from 49 African countries were hosted at the Anhui Academy of Governance for an eight-day seminar that was organized by the Anhui Provincial Foreign Affairs Office, Hefei City, Anhui Province, China. A province known for its vitality in innovation giving priority to three innovative sectors including quantum information, fusion energy and deep space exploration.

Additionally, Anhui has abundant ecological resources; the production of grain, cotton and edible oil takes the lead in China. Notably out of 10 China's most famous teas, Anhui got 4. The mountainous regions in southern Anhui and Dabie Mountain are crowned as the lungs of Eastern China.

The host institution, the party school of Anhui Provincial Committee of C.P.C (Anhui Academy of Governance) serves as a training base for leading cadres and outstanding young and middle-aged officials and provides a vital platform for studying and promoting Xi Jinping's thoughts on socialism with Chinese characteristics for a new era and promoting the ideological and theoretical development of the party.

Anhui, through IFLYTEK company, has been exploring the frontiers of artificial intelligence. The company is dedicated to the industrialisation of AI, with a vision to enable machines to hear, speak, understand, and think, thereby shaping a brighter future with artificial intelligence. IFLYTEK has established China's only National key laboratory of cognitive intelligence and the national engineering research centre for speech and language information processing.

The concept of common prosperity and rural Revitalization was made clear On April 24, 2016, when General Secretary Xi Jinping visited Dawan village and delivered an important speech, emphasizing that "no one shall be left behind on China's development path toward a well-off society, especially people in old revolutionary bases" in the past few years the village has implemented the spirit indicated in the speech in good faith.

With the development philosophy of "lucid waters and lush mountains are invaluable assets" deep in mind, the village blazed a new trail of "lifting people out of poverty and pursuing a well-off society with steady efforts while promoting rural revitalization without sacrificing the natural environment". Dawan village has been granted such titles as "National Model for Poverty Alleviation", National Advanced Grassroots Party Organization" China's Beautiful Leisure Village" and Anhui's Most Beautiful Tea Village" and was selected as the best practice of national rural tourism poverty alleviation and the founder of rural revitalization demonstration villages in Anhui province.
